

Cover Letter for Senior Software Engineer Position at Enefit

Dear Hiring Manager,

I am excited to apply for the Senior Software Engineer position at Enefit. With over 25 years of experience in software development, I bring a strong background in **Python**, **JavaScript**, and **data management**, along with a passion for solving complex problems and driving innovation.

At Entusiastid OÜ, I developed and maintained the **Entu data management platform**, used by schools, museums, and businesses. My work involved designing databases, integrating systems, and collaborating with clients to address diverse business requirements. Additionally, at Eesti Mälu Instituut, I built the **eMem database** and web interface for historical data, enabling historians to work directly with MySQL databases.

I am proficient in Linux environments, Bash scripting, and REST API design. My strong analytical skills and problem-solving abilities have been honed through years of tackling technical challenges and optimizing workflows.

Enefit's mission to shape the future of energy markets resonates deeply with me. I am particularly drawn to the opportunity to work in a fast-changing international environment and contribute to innovative solutions in the energy sector.

I have attached my CV for your review and would welcome the opportunity to discuss how my skills and experience align with Enefit's goals.

Thank you for considering my application.

Sincerely,

Mihkel Putrinš
